Optional ThinkPad X4 UltraBase Dock

This option is available to expand the functionality of your ThinkPad X40. To learn more, press the blue Access IBM button and enter "X4 UltraBase" in the Access IBM keyword search field.

Installing Optional memory

You can increase the amount of memory in your computer.

Note: Use only memory types supported by your computer. If you install the optional memory incorrectly or install an unsupported memory type, a warning beep will sound when you try to start the computer.

1 Install the optional SO-DIMM:

- 1 Touch a grounded metal object to reduce any static electricity in your body that could damage the SO-DIMM. Avoid touching the contact edge of the SO-DIMM.
- 2 Turn off the computer.
- 3 Disconnect the AC adapter and all cables from the computer.
- 4 Close the computer display and turn the computer over.
- 5 Remove the battery.
- 6 Loosen the screws next to DIMM icons on the expansion slot cover, and then remove the cover.

- 7 If a SO-DIMM is already installed, remove it as shown. Save the SO-DIMM for future use.

- 8 Align the notch in the contact edge of the SO-DIMM with the divider in the socket. Firmly insert the SO-DIMM into the socket at an angle of 20 degrees **1** and then pivot it downward until it snaps into place **2**.

- 9 Replace the expansion slot cover. **Attention:** Never use the computer with the expansion slot cover open.
- 10 Replace the battery and re-connect the AC adapter and cables.

2 Verify proper installation of the optional SO-DIMM:

- 1 Turn on computer.
- 2 Press the Access IBM button when prompted during startup.
- 3 Open the IBM BIOS Setup Utility by clicking "Access BIOS" under the "Configure" category or by double-clicking "Start Setup Utility."
- 4 Verify that the "Installed memory" item shows the total amount of memory installed in your computer. For example, if your computer had 256 MB of standard memory and you install an additional 512 MB SO-DIMM, the quantity shown in "Installed memory" should be 768 MB.
