Statement 1:

DANGER

Electrical current from power, telephone, and communication cables is hazardous.

To avoid a shock hazard:

- Do not connect or disconnect any cables or perform installation, maintenance, or reconfiguration of this product during an electrical storm.
- Connect all power cords to a properly wired and grounded electrical outlet.
- Connect to properly wired outlets any equipment that will be attached to this product.
- When possible, use one hand only to connect or disconnect signal cables.
- Never turn on any equipment when there is evidence of fire, water, or structural damage.
- Disconnect the attached power cords, telecommunications systems, networks, and modems before you open the device covers, unless instructed otherwise in the installation and configuration procedures.
- Connect and disconnect cables as described in the following table when installing, moving, or opening covers on this product or attached devices.

То	Connect:	To Disconnect:					
1.	Turn everything OFF.	1.	Turn everything OFF.				
2.	First, attach all cables to devices.	2.	First, remove power cords from outlet.				
3.	Attach signal cables to connectors.	3.	Remove signal cables from connectors.				
4.	Attach power cords to outlet.	4.	Remove all cables from devices.				
5.	Turn device ON.						

Statement 8:

CAUTION:

Never remove the cover on a power supply or any part that has the following label attached.

Hazardous voltage, current, and energy levels are present inside any component that has this label attached. There are no serviceable parts inside these components. If you suspect a problem with one of these parts, contact a service technician.

Statement 21:

CAUTION:

Hazardous energy is present when the blade is connected to the power source. Always replace the blade cover before installing the blade.

Introducing the BladeCenter management module

This *Management Module User's Guide* contains information about configuring the management module and managing the IBM[®] @server BladeCenter[™] unit and blade servers.

Your BladeCenter unit comes with one hot-swap management module in the management bay.

The management module functions as a service processor and a keyboard/video/mouse (KVM) multiplexor for the multiple blade servers. You configure the BladeCenter unit and modules through the management module, configuring such information as the switch IP addresses. The management module provides the following external connections: keyboard, mouse, and video for use by a local console, and one RJ-45 connector for a 10/100 Mbps Ethernet remote management connection.

The service processor in the management module communicates with the service processor in each blade server for such functions as:

- · Blade server power-on requests
- · Blade server error and event reporting
- · Blade server requests for keyboard, mouse, and video
- · Blade server requests for diskette drive, CD-ROM drive, and USB port

The management module also communicates with the switch modules, power modules, blower modules, and blade servers in the BladeCenter unit to detect their presence or absence and any error conditions, sending alerts when required.

Management module controls and indicators

Management module LEDs: These LEDs provide status information about the management module and remote management connection. For additional

information, see the "Light Path Diagnostics" section in the *Hardware Maintenance Manual and Troubleshooting Guide* on the IBM *BladeCenter Documentation* CD.

- Power-on: When this green LED is lit, the management module has power.
- Active: When this green LED is lit, it indicates that this management module is actively controlling the BladeCenter unit.
- Management module error: When this amber LED is lit, it indicates that an error has been detected somewhere on this management module. When this indicator is lit, the system error LED on each of the BladeCenter system LED panels is also lit.
- Ethernet link: When this green LED is lit, there is an active connection through the port to the network.
- Ethernet activity: When this green LED is flashing, it indicates that there is activity through the port over the network link.

Management module IP reset button: Do not press this button unless you intend to erase your configured IP addresses for the management module and lose connection with the remote management station, the switch modules, and the blade servers. If you press this button, you will need to reconfigure the management module settings (see the information beginning with "Setting up the remote connection" on page 5 for instructions).

Press this recessed button to reset the IP configuration of the management module network interfaces (Ethernet 1, Ethernet 2, gateway address, and so forth) to the factory defaults and then restart the management module.

Use a straightened paper clip to press the button.

Management module input/output connectors

The management module has the following I/O connectors:

- One video
- One PS/2[®] keyboard
- One PS/2 mouse
- · One 10/100 Mbps Ethernet for remote console and management

The following illustration shows the I/O connectors on the management module.

Video connector

Your BladeCenter management module contains one standard video connector. The integrated video controller on each blade server is compatible with SVGA and VGA and communicates through this video port.

Use this connector to connect a video monitor to the BladeCenter unit.

$$\begin{array}{c|c}
5 & 1 \\
 \hline
 & \circ & \circ & \circ & \circ \\
 & \circ & \circ & \circ & \circ & \circ \\
\hline
 & 15 & 11 \\
\end{array}$$

Keyboard connector

Your BladeCenter management module contains one PS/2-style keyboard connector.

Use this connector to connect a PS/2 keyboard to the BladeCenter unit.

Mouse connector

Your BladeCenter management module contains one PS/2-style mouse connector.

Use this connector to connect a PS/2 mouse to the BladeCenter unit.

Remote management and console Ethernet connector

Your BladeCenter management module contains one 10/100 Mb Ethernet connector that provides the remote connection to the network management station on the network.

Use this port for remote management and remote console.

The network management station, through this port, can access control functions running in the service processor on each blade server or within each switch module. However, it cannot use this port to communicate with application programs running in the blade servers. The network management station must direct those communications through a network connected to the external ports in the switch modules in the BladeCenter unit.

The following illustration shows the Ethernet connector that is on the management module.

Configuring the management module and BladeCenter unit

When the BladeCenter unit is started, it automatically configures the remote management port on the management module, so that you can configure and manage the BladeCenter unit and blade servers. You configure and manage the BladeCenter unit remotely, through the management module, using the Web-based user interface.

Note: You can also configure the switch modules directly through an external switch module port, using a telnet interface or a Web browser. See the documentation that comes with the switch module for more information.

For the management module to communicate with the blade servers in the BladeCenter unit, you will need to configure the IP addresses for the following internal and external ports:

- Remote management port (out-of-band) on the management module. The initial autoconfiguration enables you to connect to the network management station in order to configure the port completely and to configure the rest of the BladeCenter unit.
- Internal Ethernet port on the management module for communication with the Ethernet switch modules.
- The internal Ethernet management port on each Ethernet switch module, for communication between the management module and the Ethernet switch module. You configure this port by configuring the IP address for the switch module.

To communicate with the blade servers for such functions as deploying an operating system or application program, you also will need to configure at least one external (in-band) port on an Ethernet switch module. See the *IBM @server BladeCenter Type 8677 User's Guide* for information about configuring external ports on Ethernet switch modules.

The management module supports the following Web browsers for remote access. The Web browser that you use must be Java-enabled, must support JavaScript 1.2 or later, and must have the Java 1.4 Plug-In installed.

- Microsoft[®] Internet Explorer 4.0 (with Service Pack 1), or later
- Netscape Navigator 4.72, or later (version 6.0 is not supported)

Notes:

- 1. For best results when using the Web browser, set the resolution on your monitor to 800 x 600 pixels or higher and 256 colors.
- 2. The Web interface does not support the double-byte character set (DBCS) languages.

The Web-based user interface communicates with the management and configuration program that is part of the firmware that comes with the management module. You can use this program to perform tasks such as:

- Define the login IDs and passwords
- · Select recipients for alert notification of specific events
- · Monitor the status of the BladeCenter unit and blade servers
- · Control the BladeCenter unit and blade servers
- Access the switch modules to configure them
- · Change the drive startup sequence in a blade server
- Set the date and time
- Remote control
- · Change ownership of the keyboard, video, and mouse
- · Change ownership of the CD-ROM drive, diskette drive, and USB port
- **Note:** The IBM Director program is a system-management product that comes with the BladeCenter unit. To configure the remote alert recipients for IBM Director over LAN, the remote alert recipient must be an IBM Director-enabled server.

You also can use the management and configuration program to view some of the blade server configuration settings. See "Using the management and configuration program" on page 7 for more information.

Setting up the remote connection

To configure and manage the BladeCenter unit and blade servers, you must first set up the remote connection through the Ethernet port on the management module.

Cabling the Ethernet port

Complete the following steps to connect the Ethernet cable to the management module:

- 1. Connect one end of a Category 5 or higher Ethernet cable to the Ethernet port on the management module. Connect the other end of the Ethernet cable to the network.
- 2. Check the Ethernet LEDs to ensure that the network connection is working. The following illustration shows the locations of the Ethernet LEDs.

Ethernet link LED

When this green LED is lit, there is an active connection through the port to the network.

Ethernet activity LED

When this green LED is flashing, it indicates that there is activity through the port over the network link.

Configuring the management module for remote access

After you connect the management module to the network, the Ethernet port connection is configured in one of the following ways:

- If you have an accessible, active, and configured dynamic host configuration protocol (DHCP) server on the network, the host name, IP address, gateway address, subnet mask, and DNS server IP address are set automatically.
- If the DHCP server does not respond within two minutes after the port is connected, the management module uses the static IP address and subnet address.

Either of these actions enables the Ethernet connection.

If you do not want to use the default static values, you can configure the static IP address, host name, and subnet mask for the management module through the Web interface. The default IP address is 192.168.70.125, the default subnet address is 255.255.255.0, and the default hostname is MM*xxxxxxxxxx*, where *xxxxxxxxxxx* is the burned-in medium access control (MAC) address. The MAC address is on a label on the management module, below the IP reset button.

Important: Pressing the IP reset button on the management module replaces the configured IP addresses for the management module with the factory default IP addresses, and loses the connection with the remote management station, the switch modules, and the blade servers. If you press this button, you will need to reconfigure the management module settings.

Note: If the IP configuration is assigned by the DHCP server, the network administrator can use the MAC address of the management module network interface to find out what IP address and host name are assigned.

Communicating with the IBM Director software

The IBM Director program is a system-management product that comes with the BladeCenter unit. The IBM Director software communicates with the BladeCenter through the Ethernet port on the management module.

To communicate with the BladeCenter unit, the IBM Director software needs a managed object (in the Group Contents pane of the IBM Director Management Console main window) that represents the BladeCenter unit. If the BladeCenter management module IP address is known, the network administrator can create an IBM Director managed object for the unit. If the IP address is not known, the IBM Director software can automatically discover the BladeCenter unit (out-of-band, using the Ethernet port on the BladeCenter management module) and create a managed object for the unit.

In order for the IBM Director software to discover the BladeCenter unit, your network must initially provide connectivity from the Director server to the BladeCenter management module Ethernet port. To establish connectivity, the management module attempts to use DHCP to acquire its initial IP address for the Ethernet port. If the DHCP request fails, the management module uses a static IP address. Therefore, the DHCP server (if used) must be on the management LAN for your BladeCenter unit.

Notes:

- All management modules are preconfigured with the same static IP address. You can use the management module Web interface to assign a new static IP address for each BladeCenter unit. If DHCP is not used and you do not assign a new static IP address for each BladeCenter unit before attempting to communicate with the IBM Director software, only one BladeCenter unit at a time can be added onto the network for discovery. Adding multiple units to the network without a unique IP address assignment for each BladeCenter unit results in IP address conflicts.
- 2. For switch communication with the IBM Director server through the management module external Ethernet port, the switch module internal network interface and the management module internal and external interfaces must be on the same subnet.

Using the management and configuration program

This section provides the instructions for using the management and configuration program in the management module.

Starting the management and configuration program

Complete the following steps to start the management and configuration program:

 Open a Web browser. In the address or URL field, type the IP address or host name defined for the management module remote connection (see "Configuring the management module for remote access" on page 6 for more details).

The Enter Network Password window opens.

2. Type your user name and password. If you are logging in to the management module for the first time, you can obtain your user name and password from your system administrator. All login attempts are documented in the event log.

Note: The initial user ID and password for the management module are:

- User ID: USERID (all capital letters)
- Password: PASSW0RD (note the zero, not O, in PASSW0RD)
- 3. Follow the instructions that appear on the screen. Be sure to set the timeout value you want for your Web session.

The BladeCenter management and configuration window opens.

Management and configuration program options

From the management and configuration program main menu, you can select settings that you want to view or change.

The navigation pane (at the left on the management module window) contains navigational links that you use to manage your BladeCenter unit and check the status of the components (modules and blade servers). Descriptions of the links are as follows:

Monitors

Use the choices in this section to view the status, settings, and other information for components in the BladeCenter unit.

Select this choice to view the overall system status, a list of outstanding events that require immediate attention, and the overall status of each of the blade servers and switch modules.

Blade Servers:

- Bay The lowest-number bay the blade server occupies.
- **Status** An icon that indicates good, warning, or bad for the particular blade server. Click the icon for more detailed status information.
- Name The name of the blade server.
- Pwr The power state (on or off) of the blade server.
- **Owner** An indication of whether the blade server is the current owner of the following BladeCenter resources:
 - **KVM** Keyboard, video, and mouse.
 - **MT** The CD-ROM drive, diskette drive, and USB port.
- **Network** An indication of which network interfaces are on the blade server (Ethernet or Fibre Channel).
- **WOL** An indication of whether the Wake on LAN[®] feature is currently enabled for the blade server.
- Local Control an indication of whether the following options are enabled:
 - Local power control
 - Local keyboard, video, and mouse switching
 - Local CD-ROM drive, diskette drive, and USB port switching

Switch modules:

- Bay The number of the bay the switch module occupies.
- **Status** Icon that indicates good, warning, or bad for the particular switch module.
- **Type** The network interface (Ethernet or Fibre Channel) the switch module uses.
- MAC Address The medium access control (MAC) address of the switch module.
- IP Address The IP address of the switch module.
- **Power** The power state (on or off) of the switch module.
- Details Text information about the status of the switch module.

Management module:

- **Bay** The number of the bay that the management module occupies.
- **Status** An icon that indicates good, warning, or critical for the particular management module. Click the icon for more detailed status information.
- **IP Address** The IP address of the remote connection (external Ethernet port) on the management module.

Power Modules:

- Bay The number of the bay that the power module occupies.
- **Status** An icon that indicates good, warning, or critical for the particular power module.
- · Details Text information about the status of the power module.

Blowers:

- Bay The number of the bay that the blower module occupies.
- **Status** An icon that indicates good, warning, or critical for the particular blower module.
- **Speed** The current speed of the blower module, as a percentage of the maximum revolutions per minute (RPMs). The blower speed varies with the thermal load. An entry of Offline indicates that the blower is not functioning.

Front panel: The temperature status for the front of the BladeCenter unit.

Select this choice to view the vital product data (VPD) for the firmware in all blade servers and the switch modules and management module in the BladeCenter unit. The firmware VPD identifies the firmware type, build ID, release date, and revision number. The VPD for the firmware in the management module includes the file name of the firmware components.

Blade tasks

Select the choices in this section to view and change the settings or configurations of blade servers in the BladeCenter unit.

Power/restart

Restart MM								
Log Off	Powe Powe Rest	er On B er Off B art Blac	lade lade le					

Select this choice to perform the following actions on any blade server in the BladeCenter unit:

- Turn on or turn off the selected blade server (set the power state on or off).
- Enable or disable local power control. When local power control is enabled, a local user can turn on or turn off the blade server by pressing the power-control button on the blade server.
- Enable or disable the Wake on LAN feature.
- Restart the blade server or the service processor in the blade server.

Select the blade servers you want to perform an action on; then, click the appropriate link below the table for the action you want to perform.

Remote control

IBM.	BladeCenter Manag	gement Module	eserver
Logged in to SN#			
✓Monitors System Status Event Log LEDs Hardware VPD Firmware VPD	Remote Control Sta KVM owner: Media tray owner: Console redirect:	atus Bladel - SN#229X7P J1NN since 10/16/2002 14:12:20 Bladel - SN#229X7P J1NN since 10/16/2002 14:12:20 No session in progress.

This session will allow have full keyboard and mouse control. You can also change KVM a M switching dia tray switching	Refresh which the boxes below and click "Save", you to access the video console of the nd media tray ownership during this we Redirect Server Console
Firmware Update Restore Defaults Restart MM Log Off			

Select this choice to:

• View the current owners of the keyboard, monitor, and mouse (KVM), and of the CD-ROM drive, diskette drive, and USB port (Media tray).

- View the details of any remote control session currently active (user ID, client IP address, start time).
- Redirect a blade server console to the remote console. On the remote console, you can:
 - Disable local switching of the KVM and of the media tray for all blade servers until explicitly enabled again. This prevents a local user from switching the console display to a different blade server while you are performing tasks.
 - Change the owner of the KVM and of the media tray.
 - View the current blade server display.
 - Control the blade server as if you were at the local console, including restarting the blade server and viewing the POST process, with full keyboard and mouse control.

Notes:

- 1. Only one remote control session is allowed at a time. If a remote control session is already active, you can end the current session and start a new one.
- 2. The timeout value for a remote control session is the same as the timeout value that you set for the Web session when you logged in.
- 3. When you redirect a blade server Linux X Window System session console to the remote console, the ability of the remote console applet to accurately track the location of the mouse cursor depends on the configuration of X-Windows. Complete the following procedure to configure the X Window System for accurate mouse tracking. Type the commands through the remote console or at the keyboard attached to the BladeCenter unit. Note that the changes require root privileges.
 - a. Enter the following commands:

init 3 (Switch to text mode if necessary)

rmmod mousedev (Unload the mouse driver module)

b. Add the following statement to .xinitrc in the user's home directory:

xset m 1 1 (Turn off mouse acceleration)

c. Add the following statement to /etc/modules.conf:

options mousedev xres=X yres=Y (Notify the mouse driver of the video resolution) where X and Y specify the video resolution

d. Enter the following commands:

insmod mousedev (Reload the mouse driver module) init 5 (Return to GUI mode if necessary)

Firmware update

Select this choice to update the service processor firmware on a blade server. Select the target blade server and the firmware file to use for the update; then, click **Update**. You can obtain the firmware files from the IBM Support Web site at http://www.ibm.com/op/aumport/

http://www.ibm.com/pc/support/.

Configuration

IBM. B	ladeCent	er Manageme	Module @server	i liti
Logged in to SN#				î
▼Monitors System Status Event Log LEDs	Blade Se Use the Bla	erver Configuration a following links to jum de Information	of other the sections on this page.

Restore Defaults	10	No blade present		
Restart MM	11	No blade present		
1 == 0#	12	No blade present		
Lug On	13	No blade present		

Select this choice to:

- Define a name for a blade server.
- View or define the startup (boot) sequence for one or more blade servers. The startup sequence prioritizes the following boot-record sources for a blade server:
 - IDE drive 1 (HDD1)
 - IDE drive 2 (HDD2)
 - CD-ROM
 - Diskette
 - Network
 - **PXE** Attempt a PXE/DHCP network startup the next time the selected blade server is turned on or restarted.

Note: In order to use the CD-ROM drive or diskette drive as a boot-record source for a blade server, the blade server must have been designated as the owner of the CD-ROM drive, diskette drive, and USB port. You set ownership either by pressing the CD/diskette/USB select button on the blade server or through the "Remote Control" choice described on page 13.

Switch Tasks

Select the choices in this section to view and change the settings or configuration on network-interface switch modules in the BladeCenter unit.

Select this choice to view or change the IP configuration of the switch modules, ping the switch module, return a switch module to the default configuration, and start the configuration and management firmware that is in the switch module.

Notes:

- 1. Before you can access the switch module firmware, the following items must be set to **Enabled**:
 - Switch module external ports
 - · External management for the external ports

From this page, click **Advanced Switch Management → Advanced Setup** and enable the items.

- 2. The initial user ID and password for the switch module firmware are:
 - User ID: USERID (all capital letters)
 - Password: PASSW0RD (note the zero, not O, in PASSW0RD)

See the *IBM* @server *BladeCenter Type 8677 User's Guide* for more information about basic configuration of the Ethernet switch module that is required for the BladeCenter unit.

See the documentation that comes with the switch module for details about the configuration and management firmware for the switch module. Documentation for the Ethernet switch module is on the IBM *BladeCenter Documentation* CD.

MM Control

Select the choices in this section to view and change the settings or configuration on the management module whose Web interface you are logged into. This includes configuring the following items:

- · The name of the management module
- · Up to 12 login profiles for logging in to the management module
- How alerts are handled
- The management module Ethernet connections for remote console and for communicating with the switch modules
- Settings for the SNMP, SMTP, and DNS protocols
- Settings for secure socket layer (SSL) security

This also includes performing the following tasks:

- · Backing up and restoring the management-module configuration
- Updating the management-module firmware
- Restoring the default configuration
- · Restarting the management module

Log Off	Advanced Ethernet Setup IP Configuration Assigned by DHCP Server	-

Select this choice to configure the two Ethernet interfaces: external (remote management and console), and internal (communication with the switch modules). You can also select this choice to view the TCP log.

- **Note:** For switch communication with a remote management station, such as the IBM Director server, through the management module external Ethernet port, the switch module internal network interface and the management module internal and external interfaces must be on the same subnet.
- External Network Interface (eth0) This is the interface for the remote management and console port.

- Interface Select Enabled (the default) to use the Ethernet connection.
- DHCP Select one of the following choices:
 - DHCP with rollover to static (this is the default).
 - DHCP only
 - Static only
- Hostname (Optional) This is the IP host name you want to use for the management module (maximum of 63 characters).
- Static IP configuration You need to configure this information only if DHCP is disabled.
 - **IP address** The IP address for the management module. The IP address must contain four integers from 0 to 255, separated by periods, with no spaces or consecutive periods. The default setting is 192.168.70.125.
 - **Subnet mask** The subnet mask must contain four integers from 0 to 255, separated by periods, with no spaces. The default setting is 255.255.255.0
 - **Gateway address** The IP address for your network gateway router. The gateway address must contain four integers from 0 to 255, separated by periods, with no spaces.
- Internal Network Interface (eth1) This interface communicates with the switch module.
 - Specify the IP address to use for this interface. The subnet mask must be the same as the subnet mask in the external network interface (eth0).
 - View the data rate, duplex mode, maximum transmission unit (MTU), locally-administered MAC address, and burned-in MAC address for this interface. You can configure the locally-administered MAC address; the other fields are read-only.
- **TCP log** Select this choice to view entries that are currently stored in the management module TCP log. This log contains error and warning messages generated by the TCP/IP code running on the management module, and might be used by your service representative for advanced troubleshooting. The log displays the most recent entries first.

You can sort and filter entries in the event log.

 Monitors Wonitors Wonitors Wonitors Event Log LEDs Hardware VPD Firmware VPD Blade Tasks Power/Restart Remote Control Firmware Update Configuration Switch Tasks Power/Restart Management MM Control General Settings Logn Profiles Alerts Network Interfaces Network Interfaces Network Interfaces Network Interfaces Restore Defaults Restart MM Log Off 	Install SSL SSL is not currently installed. To install SSL, go to the <u>BladeCenter firmware update</u> site to obtain the installation key. After download select the saved key file below and click on "Install SSL". Browse. Browse.	ing and saving the key file, Install SSL

Select this choice to view or change the secure socket layer (SSL) settings. You can enable or disable (the default) SSL, and choose between self-signed certificates and certificates provided by a certificate authority (CA).

Note: The first time you select Security, you are directed to an IBM Web page for downloading the SSL installation key. After you load the key, the Security choice functions as described.

Configuration File

Select this choice to back up or restore the management-module configuration file.

Firmware Update

Select this choice to update the management-module firmware. Click the **Browse** button to locate the firmware file you want; then, click the **Update** button.

You can obtain the firmware files from the IBM Support Web site at http://www.ibm.com/pc/support/.

Restore Defaults

Select this choice to restore the factory default configuration of the management module.

Restart MM

Select this choice to restart (reset) the management module.

Saving and restoring the configuration file

After you have configured the management module, you can save the configuration file to a diskette or other exernal media. Then, if the configuration in the management module becomes damaged or the management module is replaced, you can restore the saved configuration file to the management module. Use the management module Web interface to save and restore the configuration file (**MM Control → Configuration File**).

Note: If you cannot communicate with a replacement management module through the Web interface or the IBM Director programs, the IP address might be different from the IP address of the management module just removed. Press the IP reset button to set the management module to the factory default IP addresses; then, access the management module using the factory IP address (see "Configuring the management module for remote access" on page 6 for the factory IP addresses) and configure the management module or load the saved configuration file.

Important notes

Processor speeds indicate the internal clock speed of the microprocessor; other factors also affect application performance.

CD-ROM drive speeds list the variable read rate. Actual speeds vary and are often less than the maximum possible.

When referring to processor storage, real and virtual storage, or channel volume, KB stands for approximately 1000 bytes, MB stands for approximately 1 000 000 bytes, and GB stands for approximately 1 000 000 000 bytes.

When referring to hard disk drive capacity or communications volume, MB stands for 1 000 000 bytes, and GB stands for 1 000 000 000 bytes. Total user-accessible capacity may vary depending on operating environments.

Maximum internal hard disk drive capacities assume the replacement of any standard hard disk drives and population of all hard disk drive bays with the largest currently supported drives available from IBM.

Maximum memory may require replacement of the standard memory with an optional memory module.

IBM makes no representation or warranties regarding non-IBM products and services that are ServerProven[®], including but not limited to the implied warranties of merchantability and fitness for a particular purpose. These products are offered and warranted solely by third parties.

IBM makes no representations or warranties with respect to non-IBM products. Support (if any) for the non-IBM products is provided by the third party, not IBM.

Some software may differ from its retail version (if available), and may not include user manuals or all program functionality.

Electronic emission notices

Federal Communications Commission (FCC) statement

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits. Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits.IBM is not responsible for any radio or television interference causedby using other than recommended cables and connectors or by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Industry Canada Class A emission compliance statement

This Class A digital apparatus complies with Canadian ICES-003.

Avis de conformité à la réglementation d'Industrie Canada

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

Australia and New Zealand Class A statement

Attention: This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

United Kingdom telecommunications safety requirement

Notice to Customers

This apparatus is approved under approval number NS/G/1234/J/100003 for indirect connection to public telecommunication systems in the United Kingdom.

European Union EMC Directive conformance statement

This product is in conformity with the protection requirements of EU Council Directive 89/336/EEC on the approximation of the laws of the Member States relating to electromagnetic compatibility. IBM cannot accept responsibility for any failure to satisfy the protection requirements resulting from a nonrecommended modification of the product, including the fitting of non-IBM option cards.

This product has been tested and found to comply with the limits for Class A Information Technology Equipment according to CISPR 22/European Standard EN 55022. The limits for Class A equipment were derived for commercial and industrial environments to provide reasonable protection against interference with licensed communication equipment.

Attention: This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Taiwanese Class A warning statement

警告使用者: 這是甲類的資訊產品,在 居住的環境中使用時,可 能會造成射頻干擾,在這 種情況下,使用者會被要 求採取某些適當的對策。

Japanese Voluntary Control Council for Interference (VCCI) statement

この装置は、情報処理装置等電波障害自主規制協議会(VCCI)の基準に 基づくクラスA情報技術装置です。この装置を家庭環境で使用すると電波妨害を 引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求 されることがあります。
